Smart Wireless Headset pro
Media and Analyst Review Guide

Thanks for agreeing to try out the new Smart Accessories with your Xperia™ smartphone, designed to take your Android experience to the next level.

This reviewer guide provides you with details on how to use and make the most of these great new Smart Accessories from Sony. Step by step, you will be taken through the following experiences:

- Superior sound quality wirelessly
- Standalone MP3 functionality
- FM radio
- Android features such as ‘text to speech’

How to use and enjoy your Smart Wireless Headset pro
A step by step guide

To ensure that you make the most of all that the headset can offer we will quickly run through the set up.

- To pair the headset, go to ‘Settings’ within the smartphone.
- Select Wireless and Networks > Bluetooth Settings > Enable Bluetooth.
- Make sure the headset is turned off then press and hold the On/Off key until the pairing animation is visible in the headset display.
- In your smartphone, select ‘Scan for devices’.
- Tap ‘Smart Wireless Headset pro’. When Bluetooth pairing request appears, tap ‘Pair in your phone’ and press the Music/Select key on the headset.
- When pairing the headset with an Android phone, a phone icon appears in the display of the headset, indicating that you phone is paired and connected.
- Follow the instructions that appear in your phone to install the Smart Wireless Headset pro application. You can pull down the status bar, and then open this application and edit its settings.

What to test and experience:

The great thing about this headset is the fact that superior sound is just one of the multiple benefits. Here we provide guidance on many additional cool features that we suggest you try out. You will notice that even without a phone attached, the headset still has a range of standalone functions, including as an MP3 player or an FM radio.

- MP3 player: MP3s can be uploaded to the 2GB Micro SD card. You can then go for a run or use the MP3 player on its own within the gym for example.
- FM radio: With a built in tuner that is easy to access through the settings, you can easily listen to your favourite shows.

We recommend testing the headset using the headset with Sony Media Go (program which needs to be downloaded). This program makes it very easy to transfer music to your headset.
But that is not all: Following the pairing of the device with an Android phone, a number of cool features become available. Below we list just three of the cool Android features:

- **Making a phone call with the headset:** Without the need to access the phone at all it is possible to scroll through your recent calls and select who you would like to call.
- **Find your phone:** It is now possible to find your smartphone in your bag or around your house if you are in the vicinity by pressing a button on the headset to ring it.
- **Receiving messages:** These can either be seen on the display or read aloud using ‘text to speech’.

All of these functions can be managed in the Smart Wireless Headset pro application, which is activated via the LiveWare Manager app.
